- Chest pain and Electrocardiograph
- Suturing and advanced wound closure
- Catheterisation
- Casualty packing and transportation
- Casualty re-evaluation
- Administration

Qualification: On successful completion of this course, you will receive an Advanced Offshore First Aider certificate of attendance.

For best practice and to avoid 'skill fade' we recommend regular continuation training with the Offshore Medic and attending an annual update in first aid.

Pre-requisites: Our course consists of practical, hands on approach that will give the learner the ability to assist the Offshore Medic in a real life incident.

Learners must be physically able to demonstrate the ability to perform the practical elements of the course i.e Cardio Pulmonary Resuscitation in the kneeling position for a minimum of two minutes.

Assessment and certification

Practical skills are assessed by continuous observation by the trainer and there is a written assessment paper to check understanding.

Learners need a basic command of English

So whilst we are often able to provide support to people who for example do not have English as a first language, our ability to do so is limited by the time available and the number of people who require assistance, although we may be able to make special arrangements if requested in advance.
